

**QGIS AND OSGEO  
COMMUNITY  
PARTICIPATION**

# About myself

Usually not the smartest guy in the room, often the most enthusiastic guy in the room.

Involved in QGIS since near the start of the project.

### **Publishing**

I have content I want  
to share

### **Mapping and Cartography**

I have data to  
visualize

### **Analysis and Processing**

I have spatial data to  
analyze and draw  
conclusions from

### **Information Technology**

IT introduction to  
geospatial  
technology

### **Development**

How do I develop  
software or apps  
with spatial data?

# Events

Events are where our community gather to share updates on our work and ideas for future collaboration.

Our annual [FOSS4G](#) conference brings many of us together in one place, and local FOSS4G events and meetup groups are where members can gather with those nearby.

# QGIS

## QGIS.ORG ASSOCIATION

# Goals of a user group

- Organization of user meetings
- Coordination of development, taking into account regional/national standards and requirements
- QGIS information: meetings, articles in GIS magazines, QGIS information in social media, GIS discussion boards, etc.
- Collection of case studies of local QGIS usage
- Sponsoring: a local user group could collect reasonable annual membership fees (depending on the country). This collected funds could be used to pay development of certain features, to help with bug-fixing or as a donation to the international QGIS project.
- Establishment of interest groups, e.g. surveying, urban planning, server/web client, etc.
- Initialization/coordination of application modules, e.g. surveying, urban planning, server/web client, etc.
- Electing a representative to act as a [QGIS Country Voting Member](#)

## **General assumptions/recommendations**

- stay vendor/company neutral
- establish democratic structures for the steering committee, voting and important decision
- stay transparent, esp. if you deal with membership-fees and how you spend it
- inform the international project from time to time about your local activities

## Organization

Depending on your country, a smaller legal entity, e.g. an association, could be established. Depending on local legislation such an entity implies that you meet at least once per year (general assembly), publish a yearly report and make the financial report available to your members. Often it also implies the creation of statutes.

## **Local Country domain qgis.xx**

It is recommended to register your local country domains, e.g. qgis.ch or qgis.uk. If the domain is already taken by someone other organization, company or person please negotiate if you can transfer the owner to the local QGIS user group. The QGIS international project has registered QGIS as a trademark, which should help you during your negotiations.

# Certification

The QGIS Certificate Program is designed to promote both community involvement in the QGIS project and quality education for QGIS software. As such the application process requires applicants to both detail their contributions to the QGIS project and make their training materials available for review.

Support and promote the QGIS programme by verifying providers.
